

MONAKES FOR ARTIFICIAL INTELLIGENCE SOLUTIONS LLC

Qatar Science & Technology Park, Education City, Doha, Qatar

A QSTP PORTFOLIO COMPANY

monakes.com

CORE CAPABILITY

Monakes is an AI-powered procurement evaluation platform that generates a complete, legally defensible audit record for government tender evaluations within 48 hours. Every score is timestamped at the moment it is created, traced to the specific clause and page in the original document, and locked. The record is built as evaluation happens — not assembled afterward under pressure.

WHAT IT DOES

Parallel deployment.

Runs in parallel with any live tender cycle. No change to the institution's ERP, committee, legal timelines, or existing systems.

48-hour evidentiary record.

Produces a clause-level evidentiary record in 48 hours. In a validated deployment on a live Gulf government infrastructure tender, the institution's manual process took 19 days and was found incomplete in three scoring areas on direct comparison.

Sovereign infrastructure.

Deploys on the client's own infrastructure. No data leaves their environment. Compatible with any in-country hosting model.

THE SPECIFIC CONVERSATION

Malomatia and JAGGAER signed an MoU in March 2024 to deliver spend management solutions in Qatar's energy and utilities sector. JAGGAER optimizes procurement workflow and spend visibility. Monakes generates the evidentiary documentation layer that makes the output of that workflow legally defensible when a decision is challenged — formally or otherwise. The two platforms solve adjacent problems in the same procurement cycle. There is no overlap. There is a gap between them that government clients are currently exposed in.

Monakes does not require Malomatia to build anything, configure anything, or train anyone. Configuration is completed by Monakes before the first tender. Delivery is Malomatia's client relationship. The platform does the documentation work.
